

Claim

A structure of the lampshade mainly comprises an upper ring, a lower ring, a shade, two retaining rings and a support sheet; in which the upper ring and lower ring are made of metal rod in identical size and form; the upper ring has a spider and three ribs
5 to reinforce the structural strength, and the shade is wrapped around the upper and lower rings to form a cylindrical body so as to contain the light within; the key characteristics are: the retaining rings are in L shape, stuck to the upper and lower rings, but an adequate gap is formed from the shade; the support sheet is a hard sheet winding into cylindrical hollow and stuck together by a section of
10 two-side adhesive tape at both ends; the support sheet will be inserted into the gap formed between the shade and two retaining rings; this assembly practice achieves easy, quick assembly and disassembly and great saving in time production cost.
